

## Global Health

An international body of knowledge

*Source: CABI Publishing*

Global Health is a specialist international public health database for academics, researchers, public health practitioners, NGOs, policy makers, clinicians, healthcare professionals and students.

In addition to comprehensive coverage of the core public health literature, it includes significant unique content (compared with the other mainstream health databases) particularly in the areas of tropical medicine, infectious diseases, vector control, food safety and epidemiology.

It can provide you with

Over 1 million records, 95% of which contain informative abstracts.

More than 70,000 records selected, abstracted and classified by subject specialists every year.

Information from more than 3500 serials, as well as a similar number of non-serial sources - books, book chapters, reports, conference proceedings, patents, theses, and electronic-only publications added annually.

Difficult-to-obtain and obscure publications from more than 125 countries.

Sources in over 50 languages, translated into English.

Combined with its complementary archival database - Global Health Archive - access is provided to almost a century of public health research.

Broad Subjects:  
Life Sciences

Specific Subjects:  
Agronomy
